

Using a laptop with phone data to access the internet

Got a laptop but no broadband at home for the internet?

Got a mobile phone with unlimited data but you can't use the phone to do your college work?

You could try turning your mobile phone into a WiFi hotspot so that you can use your laptop to connect to your mobile phone for internet access.

Each phone and operating system has a different 'tether setup' but usually in the same options for either iOS or Android.

A guide can be found [here](#).

If you have a Vodaphone sim (or another sim with a data plan) you could buy a sim-free dongle for the sim card (not a wifi only dongle).

You can then use the mobile data from the sim as the internet access. We can't make a specific recommendation as there are so many different devices and sims available but an example of a sim-free dongle is [here](#).
